SEVE Hydro Extractor

The SEVE Hydro Extractor is a small capacity commercial hydro that uses centrifugal force to quickly reduce the residual water in items after washing.

**Features:**

- Fully stainless steel inner and outer drums
- 5/6kg capacity
- Fully automatic operation with auto stop
- Only 3 minutes required for a cycle*
- Very low power consumption.
- Operates off a standard 220v plug point
- Maximum spin speed of 3200 rpm
- Operation by gyroscope.
- Safety catch.

**Benefits:**

- Faster drying time
- Energy saving
- Preserve fabrics
- Reduces ironing
- Automatic balancing
- Safety
- No special installation required
- No more stress
SEVE Hydro Extractor

Benefits:

**Faster drying time:** The SEVE hydro extractor removes up to 80% of the moisture from laundry in just 3 minutes so you can air dry your laundry in a fraction of the time, iron certain fabrics immediately or run a significantly shorter cycle in the tumble dryer.

**Energy saving:** Uses 100 times less electricity than a tumble dryer saving money and reducing your impact on the environment.

**Preserve fabrics:** No heat damage and is safe for all fabrics. It even removes residual detergents so laundry dries cleaner, feels softer and lasts longer.

**Reduces ironing:** Clothes are ready to wear straight from the hydro. Quickly steam out creases with our Highborn II or Hand Held steamers**.

**Automatic balancing:** Operation by gyroscope affords quick and simple loading. No need to lay the items carefully in the inner drum, the gyroscope controls the acceleration speed and automatically balances the load. Stops very quickly - fitted with an ABS breaking system.

**Safety:** Equipped with a child proof safety catch and auto stop if the lid is opened.

**No special installation:** The hydro is self balancing on its own feet. No bolting down required. Simply put a tub at the drain to catch the water being extracted or connect a drain hose directly to a floor drain. No tools required. Each unit is supplied fitted with a SA rated 15am plug. ***

**No more stress:** No more waiting for hours or days for laundry to air dry inside. No more damp smelling fabrics. No more sky rocketing electricity bills. No more heat damage.

* Maximum of 5 cycles per hour permitted. I.e. only 1 load/cycle per 12 minutes as the motor may overheat and burn out. In such case the guarantee will be void.

** Details of these products supplied on request.

*** In the case of bulky items care must be taken after starting to make sure that the machine is stable. A hand on the top is usually sufficient to steady the machine as it gathers speed. If shaking continues stop the machine and reload the items or change the composition of the load, smaller items mixed with larger items. Do not continue to operate the machine if there is a continuos or repeated out of balance condition. The machine may not be safe to operate and will get damaged.
