FF-Series Finisher

FFM Professional Form Finisher

The SEVE form finisher removes creases from jackets, shirts, coats and dresses, by steaming garments from the inside outwards. The result is a drastic reduction in the time needed to finish garments when compared to conventional ironing. In so doing, it increases the productivity and efficiency of a laundry, whilst also offering a superior finish to garments, as it leaves no ironing creases and restores garments to their original 3-dimensional shape.

The SEVE FFM comes with front and rear clamps to secure the garment in position, whereafter a simple press of the foot pedal completes the quick and professional steam finishing process.

Key Features

- Automatic steam injection.
- Vacuum extraction.
- 360-degree Rotation for Easy Operation
- Manual front & rear tensioning clamps.

Essential Data

- | | | | |
